

AMENDMENTS TO THE SPECIFICATION:

Please replace the Abstract on page 1 of the specification with the following replacement paragraph:

— A system for monitoring the electromagnetic field strength received at a predetermined point ~~(26)~~ of a monitored area, ~~comprises~~ includes a device ~~(5)~~ that senses the electromagnetic field fed in at a least one frequency band to an antenna ~~(2)~~ by a transmission apparatus and transmits at least one RF power signal indicative of electromagnetic field strength to a control centre ~~(20)~~. With the control centre ~~(20)~~ a geographic data base is available that ~~comprises~~ includes information items on the mutual position of the antenna ~~(2)~~ and the predetermined point ~~(26)~~. A processing facility ~~(24)~~ with the control centre ~~(20)~~ is configured for receiving the RF power signal from the device ~~(5)~~ and ~~calculate~~ calculating from the RF power signal and the data base items the field strength received at said predetermined point ~~(26)~~ from the antenna. (2). —
